

Post-Doc position available

in the **Pole of Pharmacology and Therapeutics, Faculty of Medicine, Université catholique de Louvain in Brussels, Belgium (E.U.)**.

Candidates for the position should be highly motivated and possess a recent M.D. and/or Ph.D. degree in cell biology, biochemistry or genetics. A strong background in molecular and cellular biology is mandatory. The successful candidate will work with a dynamic and multi-national team of scientists in the fields of Cardiovascular Biology and Angiogenesis. The position is initially for 2 years and the project focused on the biology of cardiac progenitor cells, e.g. Wnt/beta-catenin signalling for their differentiation. The salary is approx. 50.000 – 55.000 € p.a. (depending on age and experience). Available immediately.

The Pole of Pharmacology and Therapeutics in the Institut de Recherche Expérimentale et Clinique (IREC, UCL) has a strong focus on deciphering the molecular basis of cellular signalling in cardiovascular and cancer tissues, including angiogenesis. It is equipped with modern facilities combining experimental approaches at the molecular, cellular and in vivo integrated levels and offers the opportunity to work with leading scientists in an international and team-oriented environment.
